About PyPI Stats

Goal

PyPI Stats aims to provide aggregate download information on python packages available from the Python Package Index in lieu of having to execute queries against raw download records in Google BigQuery.

Data

Download stats are sourced from the Python Software Foundation's publicly available [download stats](#) on Google BigQuery. All aggregate download stats ignore known PyPI mirrors (such as [bandersnatch](#)) unless noted otherwise.

PyPI Stats retains data for 180 days.

API

A simple [JSON API](#) is available for aggregate download stats and time series for packages.

Downstream

- [pypistats](#) is a [python package](#) that provides a client and CLI tool for the pypistats.org JSON API
- [shields.io](#) uses the pypistats.org JSON API to provide download count badges, like this one

for [pypistats](#) downloads 18k/month

PyPIStats.org is also [open source](#).

Who

PyPI Stats was created by [Christopher Flynn](#).

Thanks to [Hugo \(hugovk\)](#) for providing a client interface to the API.
